

ETS ANALYTICS — FREE SPSS HEALTH RESEARCH DATASET PACK

3 datasets for SPSS practice, research methods and statistical analysis

This starter pack contains three different health datasets so learners can practise different types of analysis rather than working with only one dataset.

DATASETS

01 Malaria KAP Laboratory — 93 observations, 27 variables

02 Diabetes Glucose — 75 observations, 12 variables

03 Bacterial Vaginosis — 102 observations, 11 variables

WHAT YOU CAN PRACTISE

- Data import, variable setup and value labels
- Frequencies and descriptive statistics
- Crosstabs and Chi-square/Fisher's exact test where appropriate
- Comparing groups using appropriate parametric or non-parametric tests
- Interpreting tables, percentages, p-values and effect measures
- Formulating research questions from real-world health data

IMPORTANT DATA NOTE

These are learner/research-practice datasets. The original study questionnaires, protocols, sampling information and complete coding documentation should be checked before using any dataset for a publication or substantive research conclusion. Numeric codes have not been guessed or relabelled when their original meaning was not available.

PRODUCT POSITIONING

This is the FREE starter product. Paid packs will contain larger and more specialised datasets plus deeper codebooks, analysis guides, syntax and interpretation materials.
